

Part 2: Organizational Diagnosis in Digital Transformation

Slide 1: Title Slide

- **Main Title:** Organizational Diagnosis: Knowing Your Environment.
- **Subtitle:** Understanding the forces that help or stop change.
- **Project:** DIVE Project - Training for Vietnam.

Slide 2: Why do a "Diagnosis"?

- **Concept:** Like a doctor, you must check the "health" of the university before giving "medicine" (new technology).
- **Benefit:** You don't waste time or money on the wrong solutions.
- **Example:** Don't buy 500 iPads if the University WiFi cannot support them.

Slide 3: Introduction to PESTEL

- **What is it?** A tool to look at the "Big Picture" outside your office.
- **Political, Economic, Social, Technological, Environmental, Legal.**

P	E	S	T	E	L
Political	Economic	Social	Technological	Environmental	Legal
• Government stability • Tax Policy • Regulation • Infrastructure	• Economic growth • Inflation • Monetary policy • Employment rates	• Income distribution • Demography • Education • Lifestyle factors	• International influences • Tech transfer • R&D initiatives • Communication channels	• Environmental restrictions • Climate change • Energy savings • Workforce health	• Regional laws • Court system • Health & safety • Law enforcement
ANALYSIS					

Slide 4: P – Political Factors

- **Focus:** Government and Ministry (MOET) priorities.
- **In Vietnam:** The national drive for "Digital Transformation" and international partnerships (like DIVE).

- **Example:** New government rules that require all universities to share data with the Ministry.

Slide 5: E – Economic Factors

- **Focus:** Budget and Funding.
- **In Vietnam:** Who pays for the software? Is there a budget for staff training?
- **Example:** A university wants a new "Learning Management System" (LMS), but the budget is frozen due to inflation or local priorities.

Slide 6: S – Social Factors

- **Focus:** People's expectations and culture.
- **In Vietnam:** "Gen Z" students expect everything on their phone. Professors are respected but sometimes traditional.
- **Example:** Parents in Vietnam want "prestigious" traditional degrees, but employers want "digital skills."

Slide 7: T – Technological Factors

- **Focus:** Available tools.
- **In Vietnam:** High smartphone usage, but sometimes weak campus servers or slow internet in remote departments.
- **Example:** Using "Cloud" storage (like Google Drive) instead of old physical servers to save space and money.

Slide 8: E – Environmental Factors

- **Focus:** Sustainability and "Green" University.
- **Concept:** Digital transformation reduces paper waste.
- **Example:** Moving from paper student records to digital files saves 10,000 sheets of paper per year.

Slide 9: L – Legal Factors

- **Focus:** Rules and Laws.
- **In Vietnam:** Data privacy laws and Intellectual Property (IP) for online teaching materials.
- **Example:** A professor is afraid to put their lecture online because they are worried someone will "steal" their work.

Slide 10: Institutional Constraints: Governance

- **Problem:** Who has the power to say "Yes"?
- **Challenge:** Too many committees or slow decision-making from the Rector's office.
- **Example:** A department wants a new app, but they must wait 6 months for 5 different signatures.

Slide 11: Institutional Constraints: Infrastructure

- **Problem:** The "Hardware" of the university.
- **Challenge:** Old computers, bad WiFi in classrooms, or no IT support team.
- **Example:** A teacher wants to use Zoom, but the classroom has no microphone and no tech support to help.

Slide 12: Institutional Constraints: Policy

- **Problem:** Old internal rules.
- **Challenge:** Rules that were written for paper, not for digital.
- **Example:** The "Attendance Policy" says students must sign a paper list, even if the class is online.

Slide 13: Structural Barriers (The "Hard" Barriers)

- **Definition:** Problems with the organization's "Skeleton."
- **Barriers:** Departments don't talk to each other (Silos). No clear IT department.
- **Example:** The "Finance Office" and the "Student Office" use different software that cannot "talk" to each other.

Slide 14: Behavioral Barriers (The "Soft" Barriers)

- **Definition:** Problems with the "Mindset" of people.
- **Barriers:** Fear of losing "Power." Fear of looking "stupid" in front of students.
- **Example:** An older professor refuses to use a digital whiteboard because they are afraid it will crash during class.

Slide 15: Comparison: Structural vs. Behavioral

Structural (Hard)	Behavioral (Soft)
Lack of Budget	Lack of Motivation
Slow Internet	Fear of Technology

Structural (Hard)	Behavioral (Soft)
Old Rules	Resistance to Change
No IT Support	"We have always done it this way"

Slide 16: Summary for the Workshop

- Diagnosis is about finding the "**Pain Points.**"
- You cannot fix everything at once.
- **Workshop Task:** Use the PESTEL and Barrier lists to identify the **top 3 problems** in your own department.

Stakeholder Analysis and Resistance to Change

- Stakeholder mapping (power/interest matrix)
- Professional resistance in academia
- Cultural dimensions of change
- Change curve and resistance mechanisms

Seconde moitié de matinée

Part 2b: Stakeholder Analysis and Resistance to Change

Slide 1: Title Slide

- **Main Title:** People and Power: Managing Stakeholders.
- **Subtitle:** Understanding why people say "No" and how to help them say "Yes".
- **Project:** DIVE Project - Vietnam 2026.

Slide 2: Learning Objectives

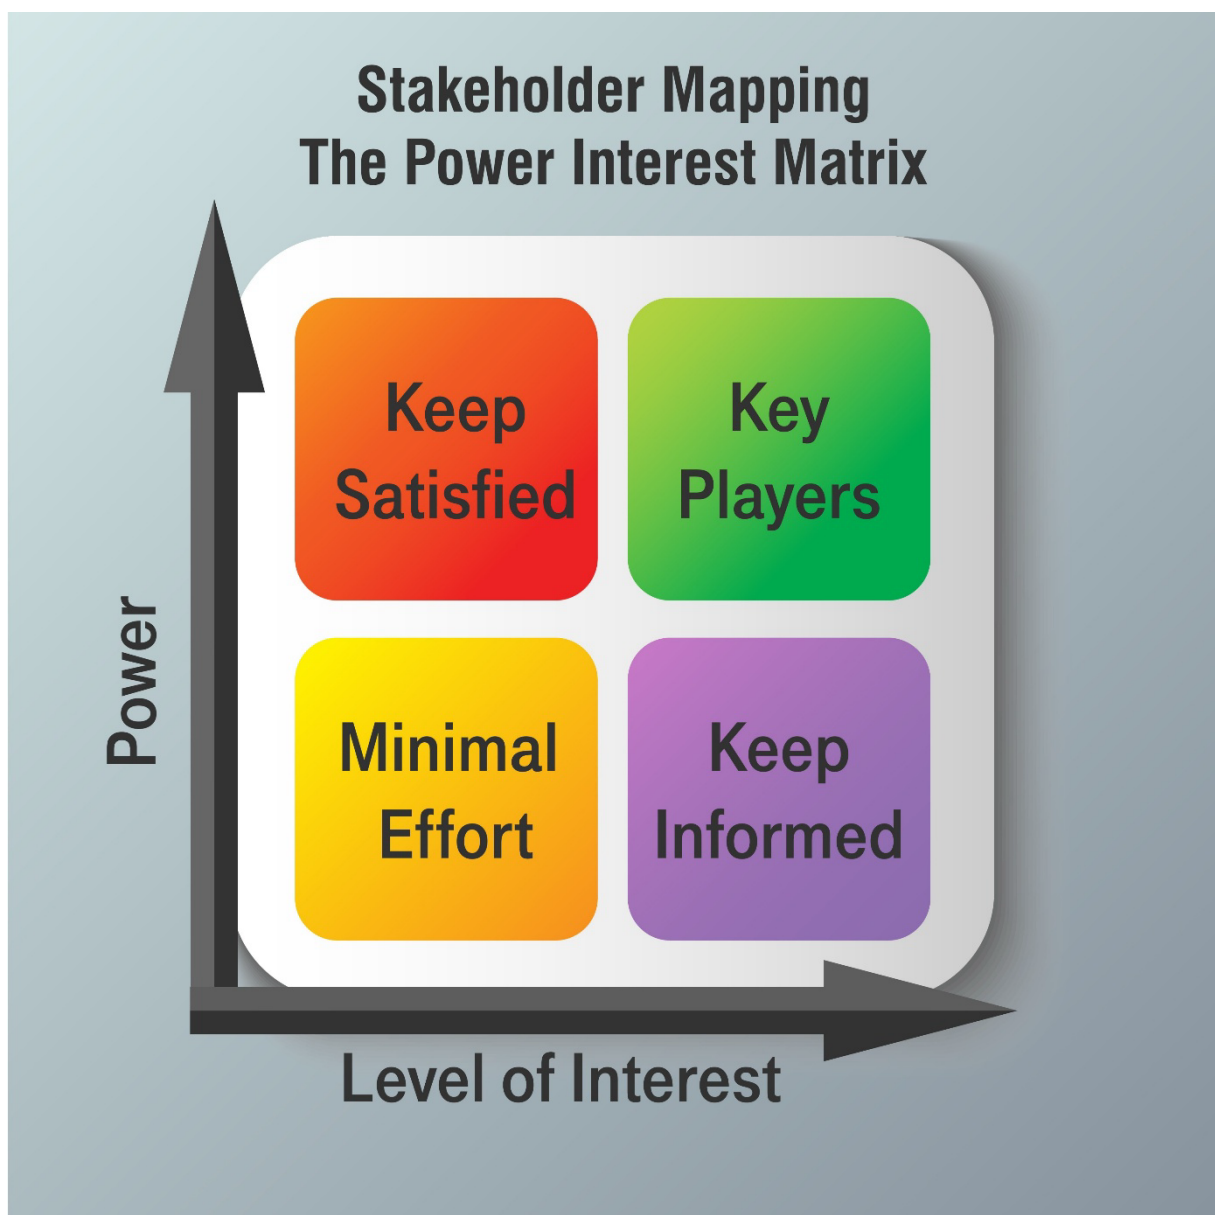

- Identify who is impacted by your project (Stakeholders).
- Use the Power/Interest Matrix to prioritize your work.
- Understand the specific culture of "Academia" (Universities).
- Learn the "Change Curve" to manage emotions.

Slide 3: What is a Stakeholder?

- **Definition:** Any person or group who is affected by your project or can affect your project.
- **In a University:** Rector, Deans, Professors, Students, Admin Staff, Ministry (MOET), IT Department.
- **Key Idea:** You cannot please everyone at the same time.

Slide 4: The Power/Interest Matrix (Theory)

- We categorize people based on two things:
 1. **Power:** How much can they help or stop the project?
 2. **Interest:** How much do they care about the project?

Slide 5: Mapping Stakeholders: An Example

- **Project:** Moving to 100% Online Enrollment.
- **High Power / High Interest:** The Rector and the Head of Admissions. (They must lead).
- **High Power / Low Interest:** The Finance Department. (They just want the budget to be correct).
- **Low Power / High Interest:** The Students. (They want it to work, but they don't decide).

Slide 6: Four Strategies for Stakeholders

1. **Manage Closely:** For the "Big Bosses" (High Power/Interest).
2. **Keep Satisfied:** For the "Influencers" (High Power/Low Interest).
3. **Keep Informed:** For the "Daily Users" (Low Power/High Interest).
4. **Monitor:** For others (Low Power/Low Interest).

Slide 7: Professional Resistance in Academia

- **The "Expert" Culture:** Professors are experts in their fields. They don't like being told "how to work" by IT staff.
- **Professional Autonomy:** "I have taught this way for 20 years, why change now?"
- **Example:** A famous Professor refusing to use the Learning Management System because they prefer their own method.

Slide 8: Why is University Change Different?

- Universities are **Decentralized**. Each Faculty (Law, Medicine, Arts) acts like a small kingdom.
- **The "Shared Governance" trap:** Decisions take a long time because everyone wants to give their opinion.
- **Example:** A Rector wants a digital change, but the Dean of Law says "Not in my faculty."

Slide 9: Cultural Dimensions: Power Distance

- **Concept:** How much do people respect hierarchy?
- **In Vietnam:** High Power Distance. People wait for the Boss to decide.
- **Challenge:** Staff might not tell the Boss that the new software is broken because they want to "show respect."

Hofstede's Cultural Dimensions Theory

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec nonummy lacinia leo. Etiam pharetra lacus sed velit imperdiet bibendum.

	Power Distance Index
	Individualism Vs Collectivism
	Masculinity Vs Femininity
	Uncertainty Avoidance Index
	Long Term Vs Short Term Normative Orientation
	Indulgence Vs Restraint

Explorer

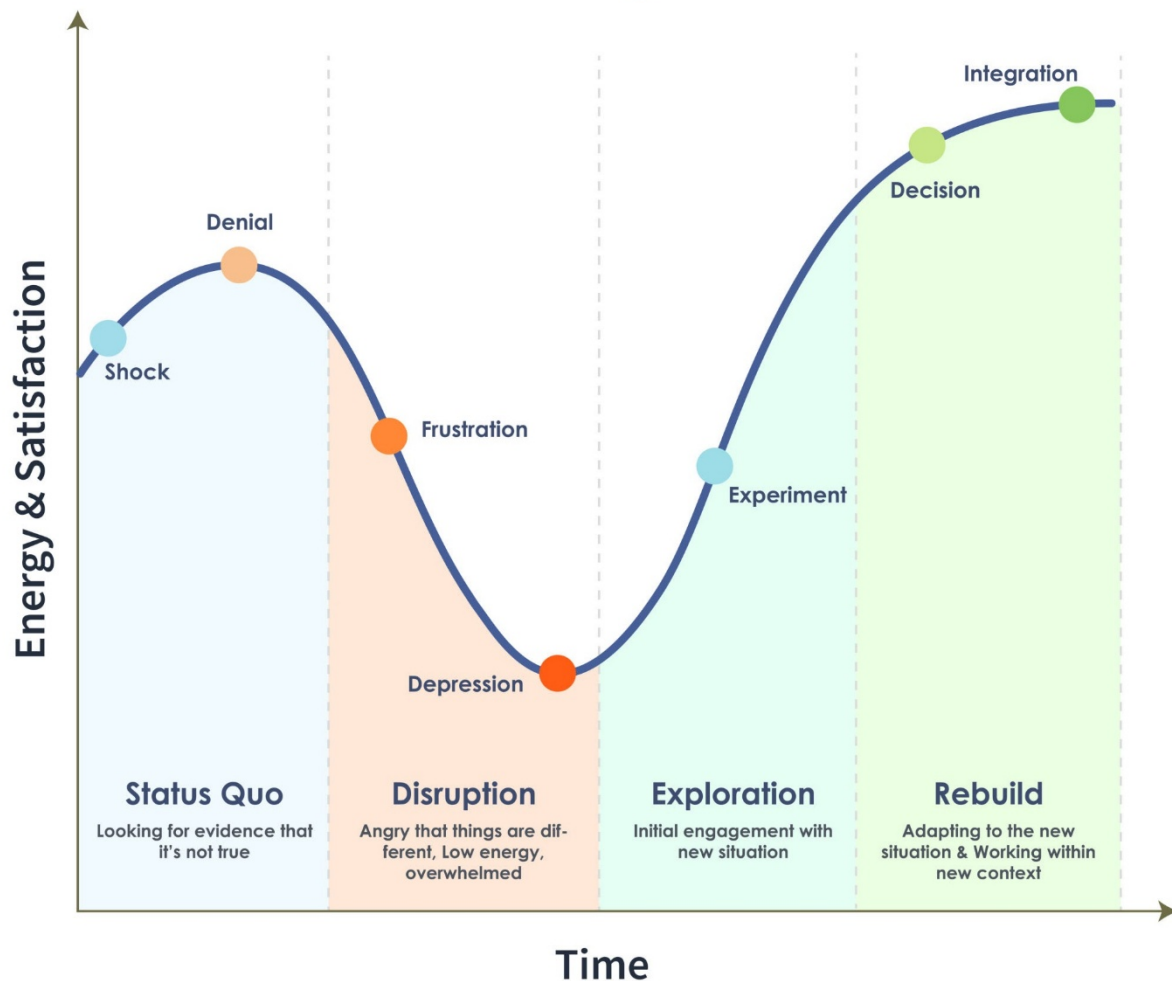

Slide 10: Cultural Dimensions: Collectivism & "Face"

- **"Saving Face":** No one wants to look bad or make a mistake in public.
- **Group Harmony:** People will agree in a meeting but might resist quietly afterwards to keep the peace.
- **Example:** In a meeting, everyone says "Yes" to the digital plan, but in reality, no one starts using it.

Slide 11: The Change Curve (Kubler-Ross adapted)

- Change is an emotional journey. It is not a straight line.
- People go through stages: **Shock -> Denial -> Anger -> Depression -> Acceptance.**

The Change Curve

Getty Images

Explorer

Slide 12: Stage 1 & 2: Shock and Denial

- **The Feeling:** "This is not happening," or "It's just a trend, it will disappear."
- **Leader's Role:** Provide clear information. Don't overwhelm them with too much tech.
- **Example:** Staff ignoring the email about the new digital signature system.

Slide 13: Stage 3: The "Valley of Despair" (Resistance)

- **The Feeling:** Anger and frustration. "This is too hard," "The old way was better."
- **Leader's Role:** Listen. Provide heavy support and training. This is where most projects fail.

- **Example:** Professors complaining in the cafeteria that the new portal is "wasting their time."

Slide 14: Stage 4 & 5: Acceptance and Integration

- **The Feeling:** "Maybe it's not so bad," "I can see the benefit."
- **Leader's Role:** Celebrate small wins. Share success stories.
- **Example:** A Professor realizes they can grade exams faster online and tells their colleagues.

Slide 15: Resistance Mechanisms: Active vs. Passive

- **Active Resistance:** Complaining, arguing, or openly refusing to use a tool. (Easier to see).
- **Passive Resistance:** Saying "Yes" but doing "No." Forgetting passwords, being "too busy," or finding "technical bugs" that don't exist. (Dangerous!).

Slide 16: Why do they resist? (The Root Causes)

1. **Fear of losing power:** "If the system is automatic, do I still have a job?"
2. **Fear of looking incompetent:** "I don't know how to use this Tablet in front of my students."
3. **Lack of trust:** "Is this just another project that will fail in 6 months?"

Slide 17: Summary for Workshop

- Identify your "Allies" and your "Blockers."
- Don't get angry at resistance; it is a natural emotional stage.
- **Workshop Task:** Pick 3 key people in your university and place them on the Power/Interest Matrix. How will you talk to them?
